SUMMARY

Aspiring AI Engineer & Full-Stack Developer with a proven track record of building secure, production-grade web platforms. Passionate about bridging the gap between Machine Learning models and scalable software architectures to drive business value.

EDUCATION

B.S. in Computer Science

Addis Ababa University • Expected 2027

• Kibur College Scholarship Recipient

SKILLS

Git, GitHub, Docker, Linux, Postman

Scikit-learn, Pandas, NumPy, NLP, Matplotlib

Python, JavaScript, SQL, C++, React, Tailwind CSS, Supabase (Auth, RLS), REST APIs

PROJECTS

Twitter Sentiment Analyzer

- Developed an end-to-end NLP pipeline to classify tweet sentiment (Positive, Negative, Neutral).
- Improved text quality by implementing tokenization, stop-word removal, and TF-IDF vectorization.
- Trained and evaluated Naive Bayes and SVM classifiers, selecting the best-performing model based on accuracy metrics.
- Visualized sentiment distributions using Matplotlib to extract actionable social media insights.

Predictive Sales Data Intelligence

- Processed and cleaned large-scale sales transaction datasets to identify seasonal and regional revenue trends.
- Built automated visualization scripts to generate quarterly performance dashboards.
- Reduced manual reporting effort by creating reusable data analysis pipelines.

Portfolio Operating System (Headless CMS)

- Architected a production-grade Headless CMS enabling dynamic management of profile, projects, certificates, and media through a protected Admin Dashboard.
- Secured platform access by implementing Role-Based Access Control (RBAC) and Row-Level Security (RLS), preventing unauthorized database modifications.
- Designed a custom Neural Glassmorphism UI system with animated components using Framer Motion, improving user engagement and visual consistency.
- Built a scalable foundation for digital identity management and personal branding.
